OCTOBER 1976

SPORTS MEDICINE NOTES TO MASTERS SWIMMERS

Richard Rahe, M.D.
Captain, Medical Corps
U.S. Naval Health Research Center
San Diego, California

Body Build and Aging

Many of you may remember my study of body build (somatotype) of men Masters swimmers conducted at the outdoor championships in Bloomington, IN, back in 1972. A major finding of these studies was that no significant difference in body build was found between swimmers in their 40's vs swimmers in their 50's. Similarly, Masters champions could not be readily differentiated from nonchampions on the basis of body build. Once a Masters swimmer obtains at least fair conditioning, his body build closely resembles that of other Masters swimmers.

Taking the average body build of Masters swimmers as a group, it was seen to be on the heavily muscled side (endomesomorph). This body build is in contrast to that of the average youthful swimmer of today whose body is on the lean and muscular side (ectomesomorph). At first, it seemed that the heavier features of the Masters swimmers' somatotype represented change secondary to aging. But when Dr. Lindsay-Carter and I reviewed somatotypes of 1948 Olympic swimmers (who are members of the same generation as the Masters swimmers studied in Bloomington), these results were very nearly the same as ours. In other words, the body build for champion male swimmers of this generation (born approximately between 1920 and 1930) has stayed remarkably the same over their lifetimes.

Decline of Swim Performance with Age

A second study, which was reported in Medicine in Science and Sports last year, dealt with the fall-off in swim performance across Masters' age groups. Dr. Arthur and I have examined Masters' records since the first meet in Amarillo, TX, in 1970. Regardless of the yearly improvement in record times, the fall-off over 35 years (25-29 yrs.) has always been very close to 1% per year. It's important to emphasize that this decline in swim performance is an average value. That means some people will decline faster, others slower, but the average will be 1% per year. It is also important to emphasize that this decline has been observed in individual swimmers who maintain nearly the identical swimming workouts year after year. Many Masters swimmers find that each year they lengthen their workouts, or swim harder during their time in the pool, than in past years. Such increases in training intensity will camouflage (for a while) the age-related fall-off in swim performance.

Decrement in maximal oxygen uptake ($\dot{V}O_2$) of 1% per year has been found in studies of sedentary adults, active athletes, as well as in world champions. All humans appear to experience a decline of approximately 1% per year in this vital physiological function, starting in their early 20's through old age. While sedentary men show a $\dot{V}O_2$ of around 40 ml/kg/min at age 25 and decline towards 28/ml/kg/min by age 55, champion athletes have a $\dot{V}O_2$ of around 70 ml/kg/min at age 25 and decline to a value near 50 ml/kg/min by age 65. A seeming paradox is that the champion athlete at age 55 has a higher $\dot{V}O_2$ than does a sedentary man of 25 years. However, this doesn't mean that the trained athlete has reversed the aging process. Furthermore, a sedentary individual at, say, 45 years of age, can begin a physical fitness program and raise his maximal oxygen consumption

over a few years' time. Once again, although this individual has improved his physical condition, he has not avoided the aging process. Once he settles on his new level of activity, his 1% per year decline will again become evident. The advantage of training is that one's 1% per year decline is on a higher "glideslope" than that of the sedentary individual.

Finally, for freestyle and backstroke, the observed decline in Masters swim performance was slightly less than 1% per year--around .8% per year. For butterfly the fall-off was slightly more than 1% per year. As I pointed out in the article, it's great fun to extrapolate backwards in time, to the age of 25 or so, from your present times to estimate what you might have been able to swim in your youth if you trained then as you do today. When this is done with Masters champions' times, the results come very close to current-day records. This makes a good deal of sense since many of our current Masters champions were record holders in their youth--and certainly then didn't utilize the training methods and distances popular today.

The Rise and Fall of Body Energy

Utilizing swim records data from young age group champions through 50-59 years Masters champions, for boys and men, I constructed the following graph (Figure 1) which I label the rise and fall of body energy. Competitive swimming is perhaps one of humans' best measures of all-out cardiovascular and muscle performance. This "stress test" is continuously carried out by athletes in their early teens through old age. A standard time measurement of competitive swim performance then, such as the 100-yard freestyle event, illustrates the acquisition and ensuing gradual loss of body energy over 50 years of human life. As can be seen on the graph, there is a remarkably rapid acquisition of strength and performance during the teenage years--leading to world record performances by swimmer athletes in their late teens or early 20's. Then starts the 1% per year decline in performance which continues steadily to at least 60 years of age. (We need more data from older swimmers to extend these studies into age groups older than 55-59 years.) An encouraging finding in the observed decline of body energy is that energy doesn't "go all at once." The gradual, linear fall-off in swim performance (energy) suggests that aging is a regularized, gradual process. The 1% per year slope of the decline "reassures" us that at 60 years of age, for instance, a person is still 70% the person he was at 30 years of age.

An utilitarian aspect of Figure 1 is its use for swim meets where Masters and age group swimmers swim together. The graph helps to decide how to compose the heats. For example, 60-year old Masters swimmers and 10-year old age group swimmers would make an exciting race--champions in both groups would swim the 100-yard freestyle in slightly less than 1 min. Similarly, 40-year old Masters swimmers should be placed with 11-12-year old age group athletes; 30-year old Masters swimmers with 13-14-year old age groupers; and 25-year old Masters swimmers would be a close match for 15-17-year old age group swimmers.

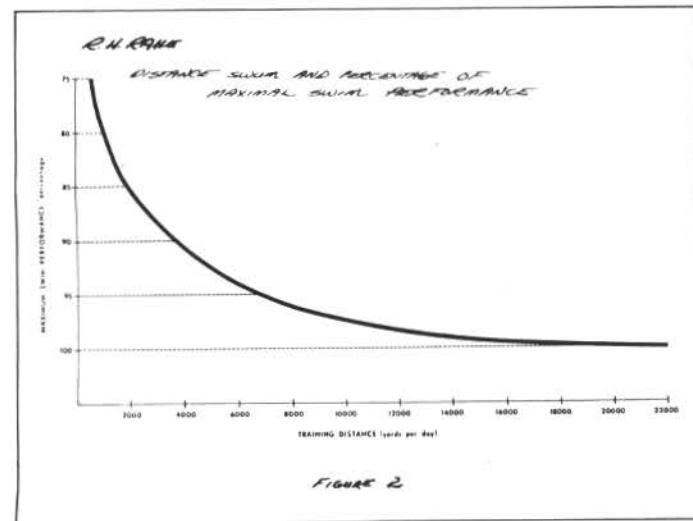

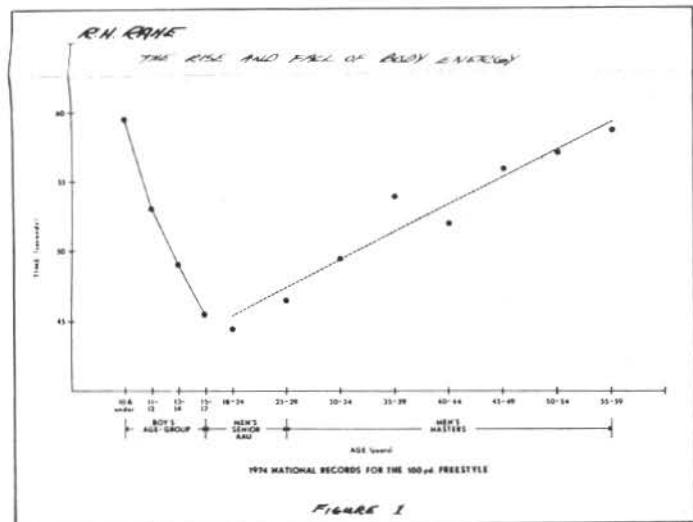

The Diminishing Benefits of Increasing Workouts

A second graph (Figure 2) presents a composite of information provided me by Masters champions who continued year after year, regardless of the fact they had to improve their swim times each year, despite aging, to remain a champion. These men and women all found they had to extend their distance swum per day (as well as the intensity of the workouts) in order to achieve this goal. From this information I calculated a curve which summarizes the per-

centage gains swimmers achieve with progressive increases in distances swum.

If maximal swim performance is accepted to be that performance achieved on a daily workout of 22,000 yards per day, then per cent of maximal performance (% max) can be estimated for lesser distances. Increases in distances swum and concomitant increases in performance can be read off the curve. For example, swimming 1,000 yards a day allows one to achieve about 75% of his or her maximal performance. Increasing the workout from 1,000 to 2,000 yards per day is accompanied by a 10% (to 85% max) improvement in swim times. To gain another 10% improvement, however, (to 95% max), the swimmer must triple his distance--to nearly 7,000 yards per day. Finally, to achieve the remaining 5% (to 100% max) the swimmer must again triple the workout--to nearly 20,000 yards per day. As 20,000 yards requires about seven hours of swimming, very few Masters swimmers will achieve 100% maximal performance. Most of the Masters champions in my sample had gone from 75 and 80% max in 1971 to 95 to 97% max by 1975.

Thus, I conseil Masters swimmers that if they can only afford an hour a day to swim, they won't be a Masters champion but they can estimate if they would be in the running for a championship had they the time and desire to train longer. In other words, swimmers covering 2,000 yards per day can take their best time and see if a 10% improvement (which would come at 7,000 yards per day) would be competitive for a championship. If so, they can feel content that they have the potential of a Masters champion. Finally, for those swimmers who are still developing their swim skills and conditioning, this graph is an underestimation of their eventual performance. With increased swimming, they will improve their swim skills as well as their endurance. Thus, they should not be too discouraged if a projection of their current times does not come close to a current Masters record in their age group.

SWIMMING NEWS

CORRECTION: A mistake in the times printed from the SC Nations last month has been brought to my attention. Jamee Stewart won the 25-29 Women's 50 yard butterfly in the time of 28.1. The back-up time had to be used.....

APOLOGY: The following letter was received from Daniel A. Per-Lee, Attorney at Law: "On page 12 of your June, 1976 issue, there appears an article, without attribution, under the headline 'Woman Swims to Beat Polio, Wins 5 Gold Medals at Age 82'. This article was taken nearly verbatim from an article written by my wife, Myra S. Mobil, which appeared on page D-1 of the May 20, 1975 issue of the Washington Post, and was published without the permission either of Miss Mobil or the Washington Post. Consequently, Miss Mobil is requesting that you publish in the next-occurring issue of *Swim-Master*, a proper attribution of this story and an apology for the failure so to attribute it in the June, 1976 issue. A prompt reply to this letter is expected." We are truly sorry for not giving Miss Mobil credit for the article that appeared in the June issue. Sometimes people send in articles without even the name of the paper. We just try to make *Swim-Master* newsy and representative of all Masters swimmers.....

RECORDS & TOP TEN September 15th was the end of the 1976 swimming year for records and top ten. Enid Uhrich, Ed Reed and Ted Haartz ask your continued cooperation in sending in the meet results. September 30th was their deadline for receiving meet results and/or Association Top Ten Times so that the National compilation can be completed, typed and published in December. Failure to have met the 9/30 deadline could mean that some swimmers' times will not be published. The pasted up copy of the Masters Top Ten Times for 1976 must be submitted to Al Schoenfeld, Editor of *Swimming World* by November 5th. This does not give us much time to do all of this work! All data in correct event form from all meets should be sent to Ted Haartz, 155 Pantry Rd., Sudbury, MA 01776. If you have any problem, call Ted at work 617-263-2741 or at home 617-443-2977.....

CONGRATULATIONS were received from Carl O. Bauer, Father of A.A.U. Age-Group Swimming who visited us at the Nationals in St. Louis - "Dear June, A world of warm wishes today for a world of happiness always! With hearty congratulations to the 1976 A.A.U. Masters Championship Swimming Meet. More power to you!".....

FROM LAS VEGAS Louis P. Silverman writes, "After a 45-year hiatus in swimming competition, I got involved in swimming for exercise - swam in my first meet Aug. 15th, So Pac area Masters Swim meet - and got a bronze in 1500 mtr. 65-69 yr group. I am 'hooked' - met a nice group of people -.".....
SERVICES for Richard Bosse, 79, were held 8/20. Daniel E. Whiteley, Jr. writes, "Dick's death was unexpected as he was always in excellent condition for his age and was getting ready for the National LC Championships in St. Louis when he died. A former national record holder in the 50 meter breaststroke, Dick was the Dean of the Southern Ohio Masters and was held in fond esteem by all his team mates. He was a volunteer life guard and swimming instructor at the downtown YMCA, giving unselfishly of his own time by helping the neophytes and the handicapped learn to swim. He contributed much to swimming here in Cincinnati and will certainly be missed.".....

PICTURES ON PAGE 3 FROM NATIONALS IN ST. LOUIS (1) Dr. Ransom Arthur, Dr. Bumpy Jones and Judith Coble; (2) Dale Trinka, Wade Barber (Happy Meet Director) and Ron Buss; (3) Molly (Botkin) Rossiter and Jennifer Parks; (4) Fred Schlicher (fastest Masters swimmer), Fred's father (follows Fred to the meets) and Ted Haartz; (5) Ann Graham (cup cake cutie); (6) Bill Lough, National President of the Australian Union of Senior Swimmers-International; (7) Tim Garton and Phil Moriarty (Yale Swim Coach); (8) Alex Dalmau of Caracas, Venezuela and from Ecuador, A. Sangster and Pedro Garcia; (9) Frank Sykes (member of the AUSSI Committee) and Mary Connolly, Honorary Treasurer of the AUSSI; (10) Hud Stewart of Canada and Larry Smith of the New England Masters; and (11) unidentified women getting attention from the doctor of the meet - John Nelson, Olympic swimmer in 1964 and 1968.....

Remember Buster Crabbe?

He's Written A Book For The Older Guys And Gals

THE MIAMI HERALD

Friday, September 10, 1976

RICK RATLIFFE
Knight Newspapers

We knew him first as a champion swimmer who portrayed a primitive jungle savage. We met him again posing as an interplanetary wanderer, then as a cowboy, and later still as a soldier of fortune.

And now, we return to his story. Buster Crabbe — alias Tarzan, alias Flash Gordon, alias Billy the Kid in the movies, and television's Captain Gallant of the French Foreign Legion — sits down at a table in a hotel coffee shop for lunch. He orders a \$3.50 collection of sliced turkey breast, baked ham and Swiss cheese on French bread with potato salad and garnish.

"And there's a dressing with that, right?" he asks. No, there isn't. "I'll have Thousand Island," he says anyway. "And how about a milkshake. Can I get a chocolate milkshake?"

Gee whiz, gang. There's something funny about all this. Crabbe is traveling around to push a book he has written, and the book, called "Energistics," is all about a program for physical fitness that stresses the need for proper diet.

Please stay tuned.

Crabbe is 68 now. With a shrug of his shoulders, he says he does not watch what he eats because "I don't put on weight." His book, he says, made recommendations for those who want to lose weight, but those suggestions do not apply to those who have no weight problems.

As for Crabbe's body, well, just look at him. He's a bit leathery, but slim; he says he weighs 180 pounds — the same as in 1933.

And he's strong. He works out three times a week, he says, and swims every chance he gets.

Despite his exercising, Crabbe says he is not the same man he was in the 1930s.

"I don't swim as fast, and I don't work as fast," he says. In 1932, Crabbe won an Olympic gold medal in the 400-meter freestyle — the first man to swim it in less than five minutes.

Until his victory, Crabbe recalls, he had planned to finish law school and become an attorney.

But his gold medal and his physique landed him a motion-picture contract with Paramount. He starred first in a 1933 film, "King of the Jungle," in which he played an African wild man captured and brought to the United States in a traveling animal act.

That year he also played Tarzan in the movie "Tarzan the Fearless." But, he admits, he never actually bellowed the famous Tarzan yell; that, he recalls, was a tape recording of the voices of a soprano, a baritone and a hog-caller. All he did, he says, was open his mouth.

Crabbe ended up being type-cast for "strong and silent" roles.

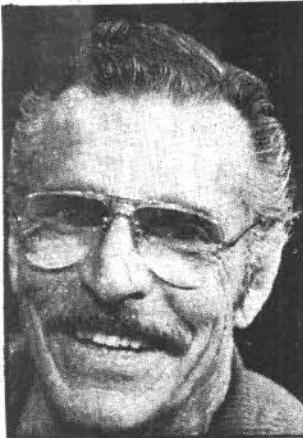

"I was a helluva lot better actor than they ever gave me credit for being in the early days," he says. "I had had one year in law school. At least I could carry on an intelligent conversation . . . I thought."

"But the word got out to the front office, 'This guy is pretty good, you know, but don't give him too much dialog, because the guy can't talk.' Pigeonholed. By my own studio."

While "pigeonholed" in the 1930s, Crabbe played science-fiction hero Flash Gordon in three movie serials later adapted for television.

He later played roles in cowboy films and other movies — more than 160 of them — but none brought him as much recognition as Flash Gordon, he says.

"That's what really kept me alive," he says, although he admits those early sci-fi thrillers — with their smoking

space ships, medieval-style costumes and vacuum-tube ray guns — look a bit silly these days.

But even so, he says, a "growing fraternity" of nostalgia buffs has embraced the movies and studied them intensely.

"They can tell me more about myself in these films than I can remember," he says. "I did the best job I could and tried to make it as believable as I could and apparently it has worked."

Those movies are more than 30 years old, and since they first appeared, many of Crabbe's contemporaries have either died or withered into senility.

But Crabbe has stayed fit, he says, and that's why he wrote the book — to keep other oldsters from turning into human pudding.

"I'm writing this book for the older guy and the older gal," he says. "I don't give a damn about the guys 25, 26 or 27 years old in regard to this book . . . They can take care of themselves."

The "Energistics" includes recommended foods to eat, vitamins to swallow and exercises to perform — calisthenics on the land and in the water, isometrics, and suggested techniques for lessening tensions.

The exercises are not particularly strenuous, he says, but they aren't supposed to be. "You can't press these people," says Crabbe. "You've got to get them interested in doing something themselves."

The book stresses the importance of living clean — of not eating or drinking too much and of not smoking.

Hey, wait a minute. Didn't Crabbe just light up a menthol cigarette?

"It's one of the bad habits I haven't given up yet," he says. "I don't approve of smoking at all."

"People have been so congenial and our biggest problem is we are running out of equipment," observed Russ Dunn, 57, a former Empir Games swimmer and president of the New South Wales Branch of AUSSI.

The Australian group incorporated the name Seniors not only because it fit the acronym, but because "masters" implied a level of competition directed toward champions or professionals.

"ACTUALLY THIS IS all an elaborate plot intended to entice you into swimming for your health," explained Dunn.

Mrs. June Krauser, national chairwoman of the AAU Masters, says the activity "has scored a first in the aging struggle. We have swimmers literally looking forward to their 30th, 35th, 40th birthdays and so on so they can move into a new age group and beat the old-timers ahead of them."

And like any sport, it's often the little extra that brings victory — like shaving body hair or applying body oil for a quicker glide through the water.

THE GENERAL FLIES HOME. Winston W. Kratz, 70, retired Air National Guard general, won the men's 100-meter and 200-meter breaststroke events for 70-74 age group swimmers in the AAU National Masters meet at Sugar Creek Sports Club Friday. Gen. Kratz set a national record of 1:50.06 in the 100.

Age doesn't deter the swim veterans

By DAVE GAUMER

The muscular, well-tanned swimmer carefully applied body oil to his cleanly shaved arms and legs as he prepared for the 400-meter freestyle race.

The scene might have been at the Olympics in Montreal earlier this month, but instead it was at the Sugar Creek Sports Club Friday afternoon and the somewhat nervous competitor was not an eager teenager but a distinguished looking businessman in his early 60s.

"Most of our swimmers take this very seriously and are highly competitive," observed Ted Haartz, one of 514 swimmers entered in the four-day AAU National Long Course Masters Swimming championships at the St. Louis County club.

"BUT YOU KNOW the real winners aren't necessarily the ones who take home the medals, but the individual who comes out of a race with a broad grin able to say, 'Hey, I just swam the best time of my life,'" suggested Haartz, a 48-year-old production manager in a vinyl-processing plant in Sudbury, Mass., and national record chairman for the 25-and-over competitive swimming organization.

The United States Masters swimming program, launched in 1971, has gone international and a comparable group from Australia, known as the Australian Union of Senior Swimmers International (AUSSI) has a delegation of 23 swimmers competing in the St. Louis meet.

"We've only been organized officially for a year, but the program is going well and we are talking of holding a world

championship meet in Australia in 1978," notes Frank Sykes, 59, one of the leaders of the AUSSI group. "We've won 20 medals here already . . . and we've still got two more days to go. That's pretty good isn't it?"

THE PRIDE OF personal accomplishment and the physical rewards of good health are two of the biggest rewards for the program, which offers competition in five year age groups up to 80-and-over, notes Haartz.

"When we started we had age groups in 10-year segments and we only went up to age 45," recalls Haartz, a former Tufts University swimmer who renewed competitive swimming in a 1972 Masters meet. "Last year in the nationals at Knoxville we had a 70-79 age group and we had a cry of indignation from the 75-year-olds-and-up about having to swim against 'those young 70s,' so we added an age group (75-79)."

"IF THE REST of our tour is like the first week we're going to have a fabulous time," noted petite 41-year-old Mary Connolly who described herself as "the baby of the group."

Mrs. Connolly, another of three from the Sydney area, took up swimming in 1973 as part of a rehabilitation program following a serious illness. An outstanding hockey player, water skier and "net ball" (basketball) performer, Mrs. Connolly now rates as one of the top swimmers in her age group in Australia.

THE SOCIAL CONTACTS and friends one makes in such competition is another big bonus of Masters swimming, according to Haartz and the Australian group was quick to agree.

Some twenty Los Angeles swimmers travelled to Hawaii to compete in Hawaii's annual Labor Day week-end swims, consisting of a relay race across the Maui Channel (9.6 miles), a Masters Meet, and the Waikiki 2-mile Rough Water Swim.

Southern California entered three teams (6 swimmers each) to compete in this year's 5th Annual Maui Channel Race. Eleven teams were entered this year--the largest field ever--including two teams from Canada.

The night before the Channel Race, a banquet was held in the Pioneer Inn Courtyard for all 66 swimmers. Enthusiasm for the race mounted as each team Captain introduced his/her team members to the group, and ground rules for the race were reviewed.

Early dawn found all eleven teams crossing the channel by boat, and the race began as the lead swimmer from each team began the race from a beach start on Lanai. At the beginning of the race conditions were very choppy as boats and swimmers spread out over the channel, however, conditions improved and surface waters calmed a bit and swimmers had only current conditions to deal with towards the end of the race.

Establishing a new record of 3 hrs, 17 min, and 18 sec, and winner of the Duke Kahanamoku Bowl was the Waikiki Swim Club-A Team. Close on their heels and also breaking the existing record was the Outrigger Canoe Club in a time of 3 hrs 30 min. The third place team - Waikiki Swim Club-B Team - also broke the existing record-their time was 3 hrs 34 min. The Los Angeles A Team finished 4th in 3 hrs 36 min 30 sec. The Toronto team placed 5th in 3 hrs 54 min and 57 sec, and the Waikiki Swim Club-C Team took 6th in a time of 4 hrs 2 min 10 sec just barely beating out the Maui team who finished a mere 10 sec behind WSC-C team in a time of 4 hrs 2 min 20 sec. The Los Angeles-B team placed 8th in 4 hrs 13 min 48 sec; WSC girls team 9th in 4 hrs 17 min 40 sec; Los Angeles-C Team 10th in 4 hrs 21 min 40 sec; and last but certainly not least was the Roach Family from Canada in 4 hrs 32 min and 45 sec.

The three Los Angeles teams were the only U.S. teams entered this year. This race is open to anyone, so how about some representation from other parts of the country. Next year's Channel Race Chairman is Jim Caldwell. Anyone interested in entering a team for next year should contact Jim at 275 Makaweli Place, Honolulu, HI 96825.

I personally want to thank Bob Rocheleau for the splendid job he did as this year's race Chairman. His tireless efforts made possible the successful swim we had this year. Speaking for the Los Angeles contingent, we all had a great time and we'll be back next year to do better.

By Dr. Tony Millar, Director Lewisham Sports Medicine Clinic, N.S.W.

"ON GROWING OLD"

The effects of aging of the human body have been studied for many years without any direct, positive answers being given to the question "Why do we age?" and "What happens when we do age?", but studies done over the years have shown that there are certain stages in life in which the average person changes some segments of the body which are involved in physical activity.

It is common knowledge that at puberty both boys and girls (but boys more so) develop an increase in muscular strength on which they are able to improve with strength building programs. Their capacity for endurance events continues to increase over the period up to 18-20-25 years of age and from then on any gains in this field tend to be minimal, and generally deterioration occurs.

When does the period of decrease start to occur? That is the question in which we are all interested, but answers are yet to come which prove conclusively that any stage is worse than the year before. Certainly, testing programs show that the vital capacity (that is, the amount of air that can be taken into the lungs) gradually increase until about 25-30 years of age, and after that it tends to decrease about 1% per annum in those who are kept physically active. This leads to some loss in the ability to take in oxygen from the air, and to pass it to the working muscle.

Changes occur in the arteries taking blood carrying oxygen from the lungs to the working muscles. We know that early in life, the age 15-20, some degenerative changes can be seen in the arteries, and these changes are the precursors of the problems of hardening of the arteries, atherosclerosis, and arteriosclerosis, that are the major factors in coronary artery disease. With increasing age there is a diminution in the level to which the pulse rate can rise on maximal exercise. A 15 year old can raise a pulse rate of 220 without any significant problem, and yet in the 50 year old such a rate would be a serious matter in most cases, and indeed, would be liable to cause some damage to the heart muscle itself, as a result of the inefficient blood supply which would result. So when we are testing the older person for fitness we must remember that they are incapable of raising pulse rates to the same degree as the younger person, and corrections must be made in testing programs in order to compare the older person with the younger one.

The development of osteoarthritis in joints is a normal wear and tear process that occurs over the years and can be seen when x-rays are taken of joints of people who have shown no signs of symptoms related to joints. The arthritis itself is not sufficient to stop people being physically active, and indeed, assuming they kept their muscles in good tone and condition, activity could be considered as a helpful process in preventing the development of symptoms.

A review of performance levels in the older person, when looked at from the highest level, that is, those with world records, shows a gradual increase in times recorded. As one ages this applies to all distances in swimming, running and cycling, those sports in which power development and endurance capacity are the operative factors. Where skill is important, as in tennis, rather than the other factors, deterioration in performance is not so rapid, nor is it so marked. Persons can perform in their own age groups at any level required by that group, provided that they are aware of their own limitations and provided also that they train up to the standard rather than starting at a set standard which is far too high for their state of training. Much of the problem in the older person comes from starting physical activity at a level which is too high for their deteriorating tissues.

The advice offered to older people is -

1. Train regularly - twice a week at least.
2. After a lay-off start at half the previous intensity.
3. Gradually increase the intensity and duration of the training effort during the season.
4. If you have a health problem, seek medical advice early.
